PROFESSIONAL SUMMARY

Computer Science undergraduate who builds and ships working software end-to-end — from database design to functional prototypes. Experience spans Python automation, SQL-backed applications, and frontend web development (HTML/CSS/JavaScript), with a habit of understanding the problem and data model before writing code. Comfortable working independently and remotely; looking to grow into full-stack development (React/Node) through hands-on production work.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, C++, SQL
Web Technologies: HTML, CSS, JavaScript (frontend UI development, currently learning React.js)
Backend & Cloud: Flask, Supabase
Databases: MySQL, PostgreSQL, SQLite (schema design, query optimization, relational data modeling)
Tools & Platforms: Git, GitHub, VS Code, ServiceNow (CMDB & CSDM)
AI/ML: NLP, Generative AI, Prompt Engineering, Machine Learning
Soft Skills: Leadership, Ownership, Teamwork, Clear Communication

EXPERIENCE

Web Development Intern | *SECRETEYE* Jul 2024 – Sep 2024

- Built and maintained responsive web pages using HTML, CSS, and JavaScript, directly shaping user-facing functionality rather than just backend logic.
- Diagnosed and resolved UI bugs across browsers, improving page reliability and user experience.
- Participated in testing and release checks before deployment, helping catch issues prior to shipping.

Research & Database Analyst | *Universidad Tecnológica de Panamá (Panama)* Sep 2025 – Nov 2025

- Designed and executed SQL queries for data extraction, validation, and reporting on structured research datasets.
- Applied relational database concepts to improve data accuracy and consistency across analysis pipelines.
- Organized and cleaned raw data for use in technical documentation, translating messy inputs into a usable structure.

AutoCAD & Python Intern | *College of Aviation Technology (Bangladesh)* Apr 2026 – May 2026

- Wrote Python automation scripts to eliminate repetitive engineering workflow steps, reducing manual effort.
- Collaborated with engineering teams to troubleshoot design issues, translating requirements into working fixes.

PROJECTS

FinFlow – Smart Finance Tracker | *Personal Project* May 2026 – In Progress

- Designed and built a personal finance tracker end-to-end, from database schema to functioning application — a fully self-directed, shipped project.
- Implemented SQL-based transaction management handling 2,000+ financial records with efficient retrieval.
- Built interactive spending analytics that automatically categorize expenses into 10+ categories.

AI Patient Discharge System | *Healthcare Hackathon* Apr 2026 – May 2026

- Built an AI-powered discharge system in Python using NLP and SQL to automate summary processing end-to-end.
- Cut manual discharge documentation time by ~40% through automated text classification.
- Improved workflow accuracy by 35% using AI-assisted recommendations and prompt engineering.

TAT Meal Tracking System | *Healthcare Hackathon* Jan 2025 – Mar 2025

- Designed a relational database and application to track hospital meal prep, dispatch, and delivery turnaround for 500+ daily orders.
- Reduced manual tracking effort by 60% through automated status updates and reporting — a real operational workflow, not just a demo.

LEADERSHIP & ACTIVITIES

- Head, Design Department & HRA Member — IAESTE LC JECRC (2025–2026)
- Core Team Member — JECRC Incubation Center (2025–2026)

ACHIEVEMENTS

- Social Summer of Code (SSOC) Open Source Contributor (2025)
- Smart India Hackathon Participant (2025)
- Healthcare Hackathon Finalist — Top 15 (2026)

CERTIFICATIONS

ServiceNow Certified Implementation Specialist – Data Foundations, CMDB & CSDM | Generative AI & Gemini CLI Training (GDG × Hack2Skill, Jun 2025) | API Development Certification (Infosys Springboard, Feb 2025) | Python Programming Certification (Udemy, Nov 2025)
